MMS Mean Flow Profile

## 1 Current Research Direction

Finish running all the cases needed from SWIRL by the 14th

## 2 Research Performed

The MMS plots shown below are a draft idea of how I want to present the data. I have only presented three grids at very coarse grids to see how certain comparisons show differences. The results below are for second order radial derivatives.

## 3 Issues and Concerns

How do I report code timing?

I need to put a user warning about potential conflicts in the MMS just in case.

## 4 Planned Research

Get plots for fourth order approximations. Require only one run for both second and fourth.

Speed Of Sound Computation at 7 grid points
